

Amendments to the Drawings

Replacement drawing sheets 1 and 2 (containing Figs. 1 and 2, respectively) are attached as an Appendix. The replacement drawings reflect the following changes:

Fig. 1 (sheet 1/3). A line representing coaxial cable 42 (*see Specification* at page 9, lines 12-14) has been labeled with the reference numeral “42”.

Fig. 2 (sheet 2/3). Reference numerals “10” and “28” have been switched, more correctly representing that variable attenuator 28 is a specific component that is included in test apparatus 10, designated generally. Reference numeral “36” has been added to refer to the coaxial cable from antenna connector 64 to port 34 (*see Specification* at page 12, lines 1-4). Control cable 46 from the USB hub 66 to variable attenuator 28 has been labeled and redrawn to more correctly show it going to the variable attenuator itself rather than port 32. Coaxial cable 42 has also been properly labeled and correctly drawn (from WLAN device 18) to port 32. In general, these changes are made so that Fig. 3 more clearly and accurately illustrates the invention as described on pages 11-12 of the *Specification*.
